Class 3 — Operators Notes

1. Arithmetic Operators

Name	Example	Description
Addition (+)	$5 + 3 \rightarrow 8$	Adds two values
Subtraction (-)	$5 - 3 \rightarrow 2$	Subtracts the right value from the left
Multiplication (*)	$5 * 3 \rightarrow 15$	Multiplies two values
Division (/)	$5 / 2 \rightarrow 2.5$	Divides and returns a float
Floor Division (//)	$5 // 2 \rightarrow 2$	Divides and rounds down to the nearest whole number
Modulus (%)	$5 \% 2 \rightarrow 1$	Returns the remainder of division
Exponent (**)	$5 ** 2 \rightarrow 25$	Raises the left value to the power of the right value

2. Comparison Operators

Name	Example	Description
Equal to (==)	$5 == 5 \rightarrow \text{True}$	Checks if two values are equal
Not equal to (!=)	$5 != 3 \rightarrow \text{True}$	Checks if two values are not equal
Greater than (>)	$5 > 3 \rightarrow \text{True}$	Checks if the left value is greater
Less than (<)	$5 < 3 \rightarrow \text{False}$	Checks if the left value is smaller
Greater than or equal (>=)	$5 >= 5 \rightarrow \text{True}$	Checks if the left value is greater than or equal
Less than or equal (<=)	$5 <= 4 \rightarrow \text{False}$	Checks if the left value is smaller than or equal

3. Logical Operators

Name	Example	Description
Logical AND (and)	$(5 > 3) \text{ and } (2 < 4) \rightarrow \text{True}$	True only if both conditions are true

Logical OR (or)	$(5 > 3) \text{ or } (2 > 4) \rightarrow \text{True}$	True if at least one condition is true
Logical NOT (not)	$\text{not}(5 > 3) \rightarrow \text{False}$	Reverses the boolean result
